

- 1 Bridge design to protect the wire in spiral hose
- 2 Low profile head to safe keep the cable ties cut edge

NORMAFIX® HVAC Clip – a flexible solution for fixing spiral hoses

In combination with our cable tie, the **NORMAFIX® HVAC Clip** makes it very easy to attach externally corrugated spiral hoses in HVAC (heating, ventilation, air conditioning) installations. It is a lightweight, flexible and economical alternative to metal spiral hose clamps. The patented shape and functionality of the **NORMAFIX® HVAC Clip** makes it possible to span the crossing of the hose spiral. Thanks to this special geometry,

the cable tie can grip the hose around its whole perimeter so that it is fixed safely. Suitable for cable ties with bandwidth 9 mm. The shape of our HVAC Clip and our cable ties match perfectly, forming a reliable system. This system works independently of the direction of the spiral on the hose. The HVAC Clip can be used for both clockwise and counter clockwise spiral hoses. One clip fits all.

Advantages at a glance

- Economical, lightweight and flexible alternative to spiral hose clamps
- Applicable for both clockwise and counter clockwise spiral hoses
- Simple installation by hand, no special tools required

Applications

- For any HVAC applications with spiral hoses
- Heating, ventilation, air conditioning
- Ventilation of greenhouses
- Clean room ventilation
- Welding fume exhaust

Material

Polyamide 6.6
